

If we teach today as we taught yesterday
We rob our children
Of tomorrow .John Dewey

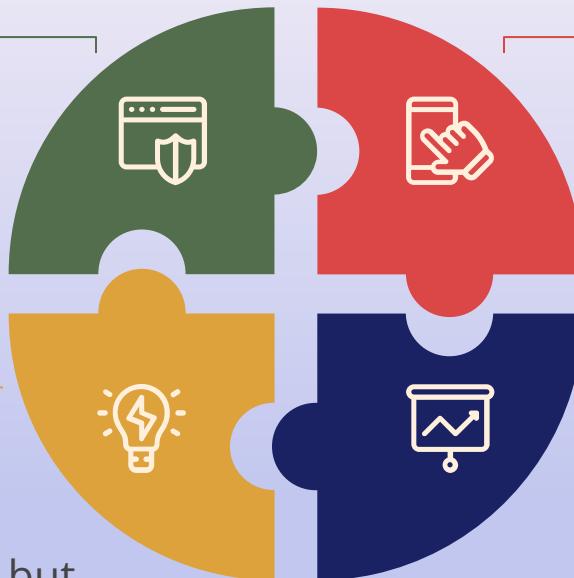

Background

The need

- Bridge the learning gap for children with disabilities

The realization

We have so many learning tools but only a few for the disabled

Little Signs

Web application that teaches children sign language

Usefulness

Our Application is created mainly for the deaf children but can be used by anyone else who wishes to learn sign language.

The Problem:

- Children learn at different paces and through out time we have created different technological advancements to make sure that no child is left behind
- But in doing so we have forgotten other children; We have left the deaf child who does not use the same applications that we use .
- The end goal is to make sure that every child has the same opportunity and experiences in education

Proposed Solution

The Little Signs introduces a whole new world of education . Bridging the gaps in education and making sure that every child get a learning tool to assist them in their learning journey

Little Signs is a Web application for kids. It is created mainly for the deaf children but can be used by anyone else who wishes to learn sign language.

Market Niche

- Our Target market are all schools especially schools for the disabled, and also individual users who are interested in using the system

This alone prove that the technology can spread to a global level.

Collaborations and partnerships

We have worked with a group of teacher from King George School who have assisted us with sign language tool we can use

Also, they helped us niche our project to a more feasible approach for children.

We have also talked to the deputy minister of Education who advised us on the different sign languages in the country and percentages of use of these languages.

**We would like to extend our partnership to You, A third member
who can assist us in developing the Little Signs Web Application.
The Project a very promising and we would like to partner with
someone who can dedicate time and mostly hours of research**

THANK YOU
